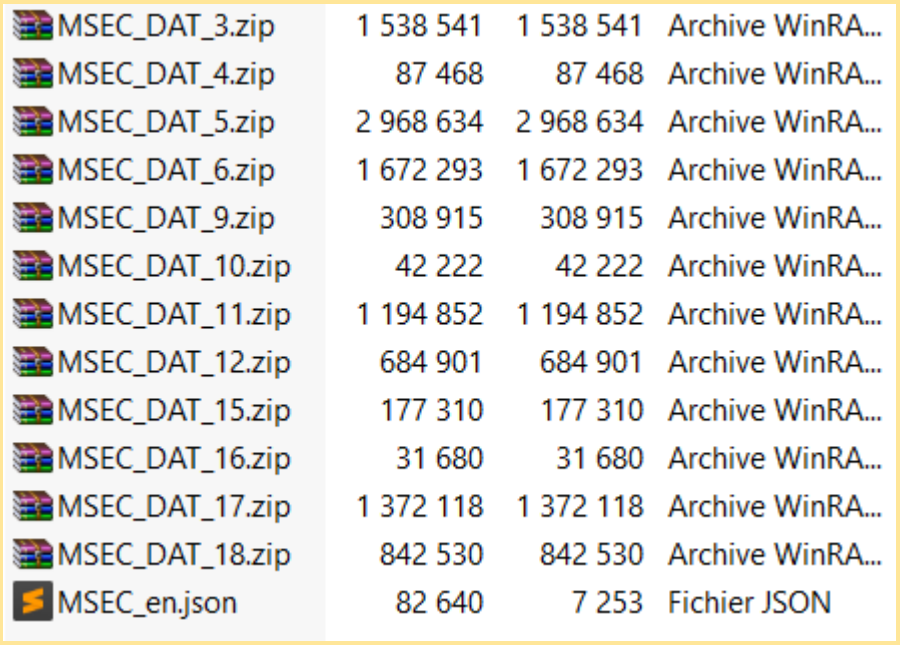
Procedure for depositing information on the server of the Theia/OZCAR information system

An authenticated http data repository has been set up under an Apache server to set up the information flows between the data producers' information systems and the Theia/OZCAR information system.

Each observatory has a repository directory. The data must be deposited as a zip archive containing itself the pivot format.json file and the zip archives with the data files. The name the zip archive does not matter (ex: MSEC_THEIA.zip).

Example of the content of the MSEC_THEIA.zip archive.



MSEC_DAT_3.zip	1 538 541	1 538 541	Archive WinRA...
MSEC_DAT_4.zip	87 468	87 468	Archive WinRA...
MSEC_DAT_5.zip	2 968 634	2 968 634	Archive WinRA...
MSEC_DAT_6.zip	1 672 293	1 672 293	Archive WinRA...
MSEC_DAT_9.zip	308 915	308 915	Archive WinRA...
MSEC_DAT_10.zip	42 222	42 222	Archive WinRA...
MSEC_DAT_11.zip	1 194 852	1 194 852	Archive WinRA...
MSEC_DAT_12.zip	684 901	684 901	Archive WinRA...
MSEC_DAT_15.zip	177 310	177 310	Archive WinRA...
MSEC_DAT_16.zip	31 680	31 680	Archive WinRA...
MSEC_DAT_17.zip	1 372 118	1 372 118	Archive WinRA...
MSEC_DAT_18.zip	842 530	842 530	Archive WinRA...
MSEC_en.json	82 640	7 253	Fichier JSON

The archive contains the information of the pivot model (MSEC_en.json file) as well as the data related to each of the data sets of the data producer (each.zip archive contains the data of a data set).

The.zip archive can be dropped on the command line server as follows:

curl -v -X PUT -u "producerId":"password" -T /chemin/vers/le/.zip https://in-situ.theia-land.fr/data/"producerId"/new/

producerId : *4 letters identifying uniquely the data producer*

password: *please contact us when the information is ready to be submitted to recover the password.*

The previous deposited archive is visible under ***https://in-situ.theia-land.fr/data/"producerId"/previous/***
